

RE ZRO®

RE ZRO® protectors have revolutionary features: they balance performance and sustainability.

They are **breathable** and ventilated thanks to a unique design process.

They are **lighter** than most protection products on the market.

They are highly **flexible**, so much so that they cannot be felt or seen while still protecting.

They are **recyclable** as they are made from a single polymer, which means they are extremely easy to recycle.

They are **biodegradable** and, thanks to TOTO-TOA® technology, have a faster biodegradation process than most synthetic materials.
